

Download Sap Implementation Guide

SAP implementation (Systems, Applications & Products implementation) refers to the name of the German company SAP SE, and is the whole of processes that defines a method to implement the SAP ERP enterprise resource planning software in an organization. The SAP implementation method described in this entry is a generic method and not a specific implementation method as such. SAP Activate combines best practices, proven implementation methodology, and guided configuration tools to fast-track the deployment of SAP S/4HANA Cloud. From planning to implementation or migration and innovation, SAP Value Assurance service packages support your SAP S/4HANA deployment when you or a system integration partner leads the project.
